
Installation and managing of Ari Ext Menu

Posted by iowa - 2013/03/01 23:38

Hello,

I am a rookie with Joomla and i am building my first website. By reading the reviews and seeing the demo of this particular menu, i decided to download it. But i am facing some difficulties to manage it. I installed it succesfully from the extension manager but nothing appears in my menu list. Could you explain me how to manage with Ari Ext Menu or is there any tutorial?

Thanks in advance.

Hello,

The module is used as standard Joomla! menu module. You can find more details here.

open 'Extensions -> Module Manager' page on Joomla! backend, click by 'ARI Ext Menu' link in modules data grid, configure it, choose position in 'Position:' drop-down, enable and save it. After this the module should appear on the site in selected module position.

I followed this instruction from the thread that you suggested me to read, but in the position i dont see any choice "drop-down". I am using joolma 2.5

Click "Select position" button near "Position" textbox. It is standard behaviour for all Joomla! modules.

"drop-down" is not a module position. It is a name of control. You can read about it here.

Select appropriate module position from available module positions. Module positions are defined in site template.

PS: Read this article about using modules in Joomla! system.

Send screenshot(s) of module settings page by email and a link to a page where you try to use the menu.

Try now. "Module Assignment" parameter was set to "No pages".
