## Ext Menu Vs YUI Menu

Posted by assist - 2010/04/19 15:18

---

The EXT and YUI Menus appear to be very similar. Is there any documentation that compares (similar to page comparing free ARI quiz to more sophisticated full ARI Quiz) them.

I am currently testing using Ext Menu to YUI Menu on my site. For the YUI menu I had to add the following code to my template CSS:

```
.yui-skin-sam .bd UL LI {  
    background-image: none;  
}
```

to eliminate the default menu's interference.

How would I eliminate its interference for the EXT menu.

Site: showing problem (seperators with "." between menu items) is <http://www.assist-associates.com>

Add the following CSS rule, please, that fix styling issue:

```
.ux-menu-container UL LI  
{  
    background-image: none;  
    padding-left: 0;  
}
```

'ARI YUI Menu' and 'ARI Ext Menu' look different and use different javascript frameworks.
