## Top Menu not visible at Position-1 in beez 20

Posted by Taxpundit - 2013/03/21 06:12

---

Hi

I am trying to use ARI Ext Menu for the drop down menu in my joomla beez 20 template. Its for the top menu. when i publish the module the menu items are not visible at position 1. what i see is only blank space. after trying few times i switched to MaxiMenuCk and the top menu at position-1 becomes visible. However I am not very comfortable with Maximenu's look and feel so I again tried to enable Ari Ext Menu and disabled MaxiMenu but still i do not see the menu at the top. Can you please tell me what could be the reason for this..? Website link is [www.taxpundit.org](http://www.taxpundit.org). At the moment maximenu is enabled so you will be able to see the menu. once I disable the top menu will disappear. can someone guide me how do i make ARI EXT Menu to work....?

Thanks....

Which CSS file should the code be added to?

Custom CSS rules can be added to "CSS Styles" parameter in module settings or to a site template CSS file.
