
(horizontal) submenu: uniform width/move the block

Posted by Fox_90 - 2013/04/02 11:39

hello,

I've got an issue i can't resolve :(

on this page: <http://test.raumausstattung-enzinger.at/>

my major problems with the menu are that the submenu items all got a different length (they need to be all the same)
the second problem is the location of the sub. I want it a few px to the left and move it a few px down.

I allready made a few adjustments in the CSS-file but I can't find the selectors for what i want to do :(

pls help me :)

Hello,

Add the following CSS rule to change sub-menu position:

```
div#menu ul.ux-menu ul
{
  margin-left: 1px;
  margin-top: 14px
}
```

About sub-menu items width, could you send an image where we can see the problem? Sub-menu items have the same width on our side.

Regards,
ARI Soft
