
How to use in responsive template

Posted by steve1978 - 2013/04/12 09:42

Hi Guys,

I'm using the Ari Ext Menu in a responsive Joomla template (Joomla 2.5).
The template is made with Artisteer.

I would like to use this extension on a mobile phone.

What do I need to change in the CSS? Or are there other solutions?

Br,

Steve

Hello,

Currently the menu is not responsive.

Regards,
ARI Soft
