
main menu and ARI ext menu apears

Posted by helixdata - 2013/05/24 23:11

I installed the ARI ext menu and when I got my site, appears the ARI ext menu and the main main with the same links both (It happend the same with the ARI YUI menu).

If I unpublish the main menu I do not have anything. I need just only one ARI menu that will work.

Our template was generated by artister software.

You can see my problem at <http://www.snailhosting.com/edpedemonte>

Best regards from Peru, SA
