
Sub-Menu Items not showing in IE

Posted by Trefex - 2013/06/03 21:07

Dear all,

You can see my site @ www.luxdoc.org.

It works fine in FF, Chrome but the drop-downs do not work in IE.

Admin back-end available on request.

Thank you so much for your help,

Joomla 3.1.1

Ari Ext 2.2.5

IE 10.0.9

Hello,

Open browser's error console and you will see it contains javascript errors. These errors are not related to "ARI Ext Menu", but they prevent execution of javascript of the extension. Fix the errors and the extension should work fine.

PS: It seems errors occur in site template javascript files (md_stylechanger.js and hide.js files).

Regards,

ARI Soft

Hey,

I just changed some options in your plugin and in a slideshow plugin and now it works, even though the errors still appear.

Also, the error comes from mootools.js. How to fix that is beyond me :

Thank you for your help though, I think now it works kind of, albeit a bit shaky :)

Best,

=====
