sub menu overflow issue URGENT

Posted by karthikemin - 2013/06/07 04:34

_____

Hi thank you for this great module, which is very useful.

I am facing issue with solving sub-menu overflow in the following www.equipmentbuzzar.com website can you give me suggestion to solve it?

Thanks

_____

Hello,

This problem with site template styles. Add the following CSS rule to fix the problem:

```
#userarea .floatleft
{
 overflow:visible;
}
```

Regards,
ARI Soft

_____

Once again thank you for your quick support.

Could you please help me on another issue in this page http://www.equipmentbuzzar.com/index.php/concrete-batching-plants

where the "equipment buzzar" title and its background column need to be fitted with the ari ext menu width. Please guide me on achieving this.

Thank you
