## Main Level not displaying when sub menu displays

Posted by goody - 2013/06/07 13:47

---

When I go to a sub menu item the menu for that page only displays the main level for that page. The main level items for the other pages are not included in the page source? View at <http://hubbardnew.elliswyatt.com/> . Select main level Locations then Albertville.

Hello,

Set "Show only active sub-menus" parameter to "No".

I used this fix, and it worked, but there remains on the sub menu's associated article a strange hyperlink with that submenu's title, on the top of the page - help! :) see [sshursa.org/about/staff](http://sshursa.org/about/staff)

Could you send an image where we can see the problem?

In the upper left corner you will see a link saying "staff", which I would like to remove. It doesa not show up on the main menu's pages, just this sub-level page...

Thank you!

"ARI Ext Menu" doesn't show these titles. It is show by a breadcrumbs module.
