
adjust auto-width so line breaks do not occur

Posted by KOMMERZkunst - 2013/06/12 16:06

The site www.k3festival.com runs on joomla 2.5 and uses Ari Ext Menu.

There was a little problem with long names in sub-menus. They were many times displayed in two lines although auto-width was set.

So I checked the inline (by ARI calculated style width of li elements(?)) and found out that the calculated width was one 1px too less.

I could not figure out how to add 1px, but I found the following work-around:

I simply added:

letter-spacing: -0.01em;
into CSS to the li-elements.

I posted it here in the forum as it might be of interest for other readers and maybe there is a better, cleaner work-around.

Thanks for this great module!

Hello,

If necessary to show menu item titles in one line, possible to use the following CSS rule:

```
UL.ux-menu LI A
{
  white-space: nowrap;
}
```

Regards,
ARI Soft

perfect!
Thanks!

(many times the solution is so close but you get stuck with wrong assumptions, hehe)

Cheers,

Fritz
