
Widen Sub-menu items

Posted by ljk - 2013/06/25 17:06

Hi,

We would like to widen the sub-menu items. I have added this rule:

```
.ux-menu ul.ux-menu-sub, .ux-menu ul.ux-menu-sub li { min-width: 225px;}
```

which works on all of the sub-menus except the last one. It is getting cut off at the edge of the layout.

I have added overflow:visible to the div wrapping the menu, but that isn't helping the issue.

You can see the menu here: <http://www.new.honeycombdirect.com/>, the last sub-menu under Contact is the one that is getting cut off.

This is a Joomla 3.1.1 site with Ari Ext Menu 2.2.1.

Thank you for your help.

Hello,

This problem with site template styles. Add the following CSS rule:

```
body #container
{
  overflow: visible;
}
```

Regards,
ARI Soft
