
Weird behaviour

Posted by mkariti - 2010/05/18 12:19

Hi there

sometimes when I open the website and click on a menu button it will send me to a different menu item. but will always send me to the same menu item. Lets say I have the following menu nav bar:

Home | About | Product | Contact Us

No matter which one I will click it will direct me to the About button.

To see this go to www.dadgear.co.il and click on the Messenger first option in the main menu and scroll down to the Show number o items in the page. Now chose different number and scroll up you will notice that the main menu exhibit different (ie Courier button) active menu than Messenger button. And its always goes to the courier button. Hope its clear enough.

Many thanks

Hello,

It isn't 'ARI Ext Menu' issue. This problem with VirtueMart. The module like other Joomla! menu modules indicates active menu item by 'Itemid' parameter, but VirtueMart doesn't use current 'Itemid' when a user choose number of items in drop-down. On your site it always uses Itemid=2, you can see it if open HTML code of your page:

ÖæÒÔ #Â Â

5
10
15
20
25
30
50

<input class="button" type="submit" value="éÜx" />

Incorrect menu item is highlighted due to VirtueMart sends incorrect 'Itemid' parameter.

Regards,
ARI Soft

Thanks
Do you have any l dea on How to solve this?
cheers
