
submenu permanently open

Posted by Russell - 2013/07/26 06:46

I have installed Ari Ext Menu and wish to have the submenu items open on hover. I have created the menu item as a Menu Heading and the sub menu items as single articles. I can have the submenus permanently open but can't find a way to have them open on hover.

Here is the page with the sample menu <http://www.larcs.com.au/links.html>

Hello,

The page doesn't contain "ARI Ext Menu" module.

PS: A module with "ARI Ext Menu" title at left position is not "ARI Ext Menu" module. It seems this is a menu module which is included into your site template.

Whoops. I will fix and retry.

Thanks

I have no added the Ari Ext menu properly but have two remaining problems.

1. I wish to change the background colour but the "Menu items styles" are is greyed out and I can't change them.
2. I would like the menu text on the same line as the bullets.

Here is a link to the page with the menu.

1. It can be a javascript conflict with a 3rd party extension. Where we can see the problem?
2. These bullets are defined in site template for default site template menu. Add the following CSS rules to "CSS Styles" parameter in module settings to remove them:

```
.ux-menu-container UL,  
.ux-menu-container UL LI  
{
```

```
padding: 0 !important;
margin: 0 !important;
}
```

```
.art-block .ux-menu-container ul > li:before
{
display: none;
}
```

What great support!!!

That fixed the bullet issue.

I found that I can change the various colours.

Is there a way to change the line spacing or row width to make it more compact like the main menu on the page.

Thanks again for your quick response.

We can't investigate the problem by a screenshot. We can investigate it if you provide a temporary access to your J! backend by email.

All fixed.

Thanks you so much for your prompt help.

The support for this product is outstanding.
