## Submenu under javascript applet

Posted by jorisr - 2013/08/07 12:11

---

Hi,

I just implemented the ARI Ext Menu on one of my sites. The only problem I have is that the menu is submenu is under a java applet. The problem can be seen here:

<http://asiancars.nl/index.php/impressie>

The dropdown menu is the information menu item.

I tried to set the z-index but that does not help. I also tried implementing a z-index in the div around the java item, but also no success.

I hope there is an easy solution!

Regards,  
Joris

Hello,

What browser do you use?

Hi,

The problem arises in Chrome and IE10. In Firefox it is ok.

Thanks for the quick reply!
