Menu is not showing on all pages Posted by athenken - 2013/09/06 00:31
I am using the Kenuna forum plugin on my site yet the menu does not show up correctly on these pages of my website. It shows up fine on the main page, and contact us, just not on any of the ones with the main Kenuna forum.
Is it just not compatible or is there some setting I am missing?
I have selected that the menu show on all pages, so there isn't an issue with missing anything.
Any insight would be most welcome.
Here is my site which I am enabling for short time to possibly get this fixed: www.knoticalnovelties.com
The menu is in right under the logo of the site.

Hello,
Send screenshot(s) of module settings page by email.
Regards, ARI Soft

Email has been sent. Please confirm receipt. Thank you.
Re:Menu is not showing on all pages Posted by admin - 2013/09/06 16:22
Set "Show only active sub-menu" parameter to "No".
Regards, ARI Soft
