
Submenu doesn't appear on hover

Posted by EllsyP0 - 2013/09/06 01:01

Hi,
I have two different templates for my site. One assigned to the homepage, and one assigned to the other pages. The menu works beautifully on the other pages but the submenu doesn't show on the homepage.
I have reviewed my css and can't find anything that would be keeping it from appearing.

Hello,

Open browser's error console and you will see it contains javascript error. This error is not related to "ARI Ext Menu", but it prevents execution of "ARI Ext Menu" javascript code. The problem occurs due to this code:

```
window.event(domready", function() {  
    alert(" $(document).ready(function() {  
    $(".flip").click(function() {  
        $(".module").slideToggle("slow");  
    });  
});
```

It should be:

```
window.event("domready", function() {  
    alert(" $(document).ready(function() {  
    $(".flip").click(function() {  
        $(".module").slideToggle("slow");  
    });  
});
```

This code is added by site template or a 3rd party extension.

Regards,
ARI Soft

Thanks for your quick reply. I know now that it's because my syntax is incorrect. Nothing to do with the awesome menu module.
