
Module Class Suffix

Posted by isaac71 - 2013/09/17 00:35

Hi,
I'm trying to have one of the sub menu in 2 columns.
At start I thought of using the #ext-gen6 in order to do it, for example:
.ux-menu-item110 #ext-gen6.ux-menu-sub {width:280px;}
.ux-menu-item110 #ext-gen6 .ux-menu-item-level-1 {width:130px; right:84px}
but then I've noticed that the number is always changing.
So I thought of using the class suffix but although I'm placing it in the module I cannot see it on the live site.
Any idea of why it is happening or If I can solve it another way?
Thanks you

=====

Hello,

Menu items use unique CSS class names based on menu item ID. You can read about it here.
