## Embedding search inbox in ARI Ext Menu

Posted by Marlon - 2013/10/04 13:56

---

Hello,

I want to embedd the joomla search inbox into the menubar. It shall look like the screendesign I attached, please forget about the "boxtext" and the dark-grey search button, they are already cancelled. So, how do I put the menubar, starting with Home - Produkte - and so on across the whole site with the search inbox within there?

Thanks very much for your help in advance and

with best regards,  
Marlon

Hello,

The extension doesn't support this ability. The extension shows menu items which is created in Joomla! menu manager.

Regards,  
ARI Soft
