
Submenu Hover Width too wide

Posted by Laudus - 2013/10/24 14:01

I adjusted the width of my submenu items, but when I hover over them, the highlight is the original width. I've tried adjusting different widths, but nothing gives me favorable results. Any help is appreciated.

Hello,

Send a link to a page where we can see the problem.

Regards,
ARI Soft

Yes, I take the site down when I'm not working on it. It's back up.

This problem with your custom CSS rules. At least with this CSS rule:

```
.ux-menu ul {  
  width: 120px !important;  
}
```

It is applied for sub-menus too.

Please pardon me for not being clear. I'm quite happy with the 120px wide menus and submenus. I would like to get the hover to match and not stick over the end.

You have defined "width: 170px !important" CSS property for menu items
- and element and set container width (for) elements to 120px. elements also contain left and right padding.

Thanks.

What ended up fixing it for me (not sure if it's the preferred method or not) was resizing the "nav-li2.png" image to 120px and replacing the instance of "a.ux-menu-link-first-hover.png" with "nav-li2.png" in the CSS file.
