## Trouble centering menu in mobile mode

Posted by ljk - 2013/11/14 17:55

---

Hi,

I have a site where I used the suggestion from this post: <http://www.ari-soft.com/ARI-Ext-Menu/40507-Trouble-with-centering-menu.html#40507> on how to center the menu. It worked great for desktop, but when I look at the site on a smartphone, the menu is left justified instead of centered. How do I get the menu to center on smartphones?

See: <http://www.xeva.ca/contact-us>

Thank you.

Hello,

The problem occurs because specific CSS rules are used by site template for mobile devices. Add the following CSS rule:

```
#topnav .ux-menu-container ul.ux-menu
{
  display: inline-block !important;
}
```

Hi,

If I add the line you said above, then the background image becomes very wide on mobile devices.

Is there anything else I can do to center the menu on mobile?

Thank you.

Hi,

Here is the image with inline-block set:

[http://www.ari-soft.com/images/fbfiles/images/in\\_line.jpg](http://www.ari-soft.com/images/fbfiles/images/in_line.jpg)

Thank you for your help.

template.css file from site template contains the following CSS rules:

```
/* iPad */
@media only screen and (min-device-width: 768px) and (max-device-width: 1024px) {
  #topnav .ux-menu-container ul.ux-menu {
    display:block;
  }
}
/* iPhone */
@media only screen and (max-device-width: 480px) {
  #topnav .ux-menu-container ul.ux-menu {
    display:block;
  }
}
```

which is defined "display: block" property instead of "display: inline-block" for mobile devices.

Hi,

Please see the screengrab above. This is what happens when I set the mobile versions to inline-block.

As long as I have:

```
#topnav .ux-menu-container ul.ux-menu {
display:block;
}
```

the background & content lay out properly.

As soon as I change to:

```
#topnav .ux-menu-container ul.ux-menu {
display:inline-block;
}
```

the background goes off to the right and the content is off to the left as shown in the screengrab.

Thank you.

Could you provide a link to a page where we can see the problem?

Hi,

I have setup this page: <http://www.xeva.ca/typography> to have inline-block on the ipad layout, so you can see the issue.

Thank you.
