## 1px gap between menu and dropdown submenu

Posted by irqcko - 2013/12/28 08:26

---

Hi,  
thank You for Your menu module.

I've bumped to a problem with the module that seems to me can't be solved by css alone. Dropdown submenu is 1px lower than bottom part of menu so it creates 1px gap. (This is visible even on the demo page.)

This creates specific two-folded problem for me.

- 1) This line doesn't go well with the design of website
- 2) When you move your mouse too slow over the gap, submenu disappears.

Is there any chance of getting rid of that 1 px gap?

You can see the whole thing at: [dogma.apostolskacirkev.cz](http://dogma.apostolskacirkev.cz)

Thanks a lot!

IRQcko

Hello,

Add the following CSS rule:

```
.ux-menu-horizontal .ux-menu-sub
{
    margin-top: -1px;
}
```

Regards,  
ARI Soft

Thank You.

I've used this one before but the line is still there while the submenu is being animated (and disappears after js finishes). But I guess I can set short animation time (0.1) and leave it that way.

Thanks for quick reply.
