
ARI Ext Menu dropdown not working on phone

Posted by sean@thekayakclub.com - 2014/01/04 15:46

Hi Ive got the menu install and all configured and it works fine on workstations, however I installed it so that it would work phones.

Please check out this link on a phone.

Please notice that there is a second horizontal menu with dropdowns. That menu is the ARI Ext Menu. Please notice that the dropdowns are very difficult to get to work on the phone. Its like I cant find the spot where to touch that makes the dropdown submenus appear.

It works fine on a regular computer, the problem is just on phones.

Any ideas?
Maybe some CSS?

Thank You Very Much!

Forget it. I fixed it. I just had to make the whole site not reactive.
