
problem - menu is showing over displayed images

Posted by Peleskova - 2014/01/11 18:19

Hi, on my website <http://www.koiklub.sk/index.php/fotogalerie/koi-kapre-clenov-klubu> when you click on image to see it larger, the menu is displayed over the image. I use Simple image gallery. This problem occurs only if the menu was seen on the screen before clicking on the picture. Can you anyone help? how can I display image without having menu displayed over it? http://www.ari-soft.com/images/fbfiles/images/problem_ari_ext_menu.png

Hello,

For example set "z-Index" parameter to 7000 in module settings.

Regards,
ARI Soft
