
Submenu Shows in Firefox & Chrome But Not Explorer

Posted by amadeolaw - 2014/01/12 15:34

I published a horizontal menu with submenus. When I click on the main menu items in firefox and chrome, the submenus items appear, but when I click on the main menu items in explorer 11, nothing happens.

Hello,

Main menu items are not clickable in your menu. Sub-menus appears when move mouse cursor over main menu items.

Sorry, I meant nothing happens in explorer when I hover or click on the menu item. When I hover in firefox and chrome, the submenu items appear.

I'm using explorer 11 and tried at two different computers and still the submenus do not appear when the cursor hovers over the horizontal menu items in explorer, but they do appear in firefox and chrome.

see www.amadeolaw.com

This seems to be a problem with Explorer 11 only because when I looked at the site in Explorer 10, everything looked fine and the submenu items appeared when the cursor hovers over the main menu.

We have checked it in IE 11 and it works fine.
