
Different Colour Dropdowns

Posted by webbo - 2014/01/31 11:09

Hi,

Is it possible to have different colour dropdown menus?

The site can be seen here:

<http://testenv.springfield.uk.net/>

and I'd like the drop down menus to match the colours of the top items when they are hovered over. I'd also like the top items to remain the hover colour while the sub menu is displayed?

Also, is it possible to remove the gap between the top menu and the drop down menu?

Many thanks in advance.

Ollie

Hello,

1. You can use custom CSS rules like the following one to change background of sub-menu items for specific top menu item:

```
.ux-menu-item102 A.ux-menu-link-hover,
.ux-menu-item102 .ux-menu-sub A
{
    background-color: #F2C76B !important;
}
```

2. Use the following CSS rule to remove the gap:

```
UL.ux-menu-sub
{
    margin-top: -1px;
}
```

Regards,
ARI Soft
