
Menu Items appear under ARI Ext Menu Items

Posted by vividal - 2014/03/20 15:27

I want to use the ARI Ext Menu product to display my menu but when I place the module in the menu position the only top level menu item is "ARI Ext Menu". How do I get the menu items to appear at the top level?

Joomla 3.0.3

Thanx,
rob...

Hello,

Where we can see the problem?

Regards,
ARI Soft

www.lcsrc.org (sorry meant to post that and forgot)

I had to roll back to the standard menu as we have a soft launch this afternoon and it needs to look "normal".

I have recreated the issue and buried it on the site here:

<http://www.lcsrc.org/index.php/links/ari-ext-menu-sample>

I did more testing and this seems to be tied to my template as it doesnt happen with another template I downloaded.

As I am very new to Joomla and website building I am not sure what the next step is except maybe find a new template or test other menu products...

It seems this problem with site template. It applies javascript for default menu for "ARI Ext Menu" in the selected module position.
