Manual background color change Posted by jfbeaulieu - 2014/03/25 17:52

Hi,

I would like to change a specific background color for a specific menu item (LI) but i'm not able to find how I can do that on ARI Ext Menu. I used ARI YUI Menu before and it was preaty easy to change directly by CSS.

First of all, I just tried to manually change the background color of all LI of the Menu like this :

.ux-menu li { background-color: #0099FF !important; float: left; padding-left: 0 !important; position: relative; width: 20%;

The background-color doesn't work at all. I pushed the Clear button on the side of Background color inside the ARI Ext Menu module administration but doesn't change anything.

How can I manually change the background color of any menu item (LI) without using the module adminstrator in backend?

Thank you

Hello,

Information about menu HTML layout and CSS classes is available here. It can be helpful if you want to customize the menu and don't want to use parameters in module settings.

Regards, ARI Soft
