## Submenus always open

Posted by Katfun - 2014/03/26 13:06

---

Hi

I've installed Ari ext Menu in my joomla Website that I'm developing and making the design also, but I'm having a problem, despite the fact that I've installed and uninstalled the plugin 1 time...the submenus are always open and don't hide or show according to the main item.

<http://psdesign.org/sknowledge/index.php>

Can you help me?

Also in CSS can i style the submenus specifically? I've tried `li.ux-menu-link-level-1` and `a.ux-menu-link-level-1` but is the main parent style that is assumed.

Hello,

It seems this problem with your site template. It doesn't contain the following code in index.php file between `<div>` and `</div>` tags:

Regards,  
ARI Soft

I could be here all day long trying to find a solution for this...it worked...  
Thank you very, very much.
