OSCMSC Java Problem w/ your plugin. Please Help!

Posted by Art - 2014/03/28 22:07

_____

plugin works well but for some reason when I try to use Open Source Excellence Membership Control ... The Javascript stops working on OSCMSC!

It works throughout the whole site just fine but I had to literally use Maximenu just on the menu for OSCMSC subscriptions page ((www.thebusinessjournal.com))

is there something i can do besides "onload or docready" that may fix this? maybe some sort of jconflict script i can modify?

thanx.

_____

sorry. the navigation to the non-functioning portions are

www.thebusinessjournal.com/subscriptions

and

www.thebusinessjournal.com/subscriber

..

The subscription software fails to work if your menu has "Load ExtJS library" activated to either format.

_____

ok just so customers could purhcase subscriptions, i set my OG Maxi menu to just the "subscriptions" page only and not to any where else on the site... Although the subscription software also is used under the "/subscriber" subdmain in case some one wishes to help me troubleshoot the issue. I have also tried deactivating maxi menu and many to all my scripts.. there is a conflict w/these two for some reason.

My sub software: https://www.opensource-excellence.com/shop/item/419-ose-membership-.html
and this menu are the conflicting parties

~ thank you for your time...

_____

Yes I am still having the problem. I cannot load your menu with the subscription software. The page under www.thebusinessjournal.com/subscriber is using both your menu and my sub software. There is a JavaScript issue of some sort. Please follow help

_____

I cannot click on any of the buttons below on that page..

"Not a member yet..." Or "login"

In the body of the page which is controlled by the subscription software.

Although when I deactivate your menu, the buttons on the subscription software work in the body page..

Sorry I wasn't clear before

_____

"ARI Ext Menu" and OSE are used ExtJS library and the problem occurs because two instance of ExtJS library is loaded on the page. A possible solution disable loading of ExtJS library in the extensions and load it only once (with help of a 3d party extension or directly in site template).

Regards,
ARI Soft

_____

I do not have the option to disable ExtJS from my subscriptions software but I did turn off the the ExtJS library from the ARI Ext Menu. What's the jquery script to load it say within the site template for that page? To not conflict.

_____

We described the reason of the problem in our previous post. It is not a conflict with jQuery library.

Regards,
ARI Soft

Ok I made the extension only work w/ two copies your menu. One loading the ExtJS and under pages hosted by the subscription software, I made another the second menu w/ "not loading" ExtJS. this works now...

It would be nice to just use 1 menu module instead of two.
