## Width of sub menu too wide

Posted by joknight - 2014/03/31 20:08

---

Hi there,

I have looked everywhere to find the code to change the css here to shorten the width of the menu levels shown in the screenshot.

Please let me know how and where to change the code to narrow the width.

Thanks so very much!

Jo [http://www.ari-soft.com/images/fbfiles/images/menu\\_width\\_example.png](http://www.ari-soft.com/images/fbfiles/images/menu_width_example.png)

---

Hello,

Where we can see the menu? It seems this problem with site template styles.

Regards,

ARI Soft

---

I am using the beez5 template but still cannot locate the file to change the drop down menu width, any help would be greatly appreciated. It is the 525 pixel width that i'm trying to change: please see screenshot

## Re:Width of sub menu too wide

Posted by admin - 2014/04/01 05:46

---

The menu doesn't contain "Projects" menu item. Probably it is available only for registered users:

## Re:Width of sub menu too wide

Posted by joknight - 2014/04/01 23:11

---

I didn't want the menu to be up during the day until it looked better, but I have put it back up online now so it shows so

---

you can take a look now.

economicpolicyresearch dot org.

A big thank you for taking the time on this. I've so tried every which way to make this happen myself.

## Re:Width of sub menu too wide

Posted by admin - 2014/04/02 05:56

---

The problem occurs because your modified menu.min.css file which is used by the module and the following CSS properties:

width:495px

For .ux-menu a.ux-menu-link-last CSS rule.

Regards,  
ARI Soft

## Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 08:48

---

495px was that width because it was the width of the last menu item, in this case "Contact" as I want the menu to extend across to the end of the page. If I change that width the sub menu item width becomes the same width of this last menu item.

Please see images of original post that shows the menu going all the way to the right. I don't know why your response to my post isn't in the same post as my original post.

<http://www.ari-soft.com/images/fbfiles/images/example-6c7ae9eb5cf052b844432748300abd90.png>

=====

## Re:Width of sub menu too wide

Posted by admin - 2014/04/02 09:06

---

You set 495px width for all last menu items in main menu and sub-menus. Restore menu.min.css file to original state and read here how to change menu items width.

## Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 09:41

---

Thank you for the instructions. I restored the original file and added the three individual pieces of code for each sub menu item with each item id see screenshot. It seems to work for two of the drop down items but not the last one. I have checked the menu item id and it is correct. <http://www.ari-soft.com/images/fbfiles/images/example-a8b897871a1553c29bb62de533a1e6ee.png>

here is the code in the module css:

```
#breadcrumbs {min-width: 990px;}
#{ $id } LI.ux-menu-item-level-0
{
width: 100px;
```

```
}

UL#{ $id } LI.ux-menu-item257
{
width: 150px;
}
UL#{ $id } LI.ux-menu-item256
{
width: 150px;
}
UL#{ $id } LI.ux-menu-item255
{
width: 150px;
}
```

---

## Re:Width of sub menu too wide

Posted by admin - 2014/04/02 09:46

Now width: 570px is defined for all last menu items in menu.min.css file.

## Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 09:52

not sure what to do here.

---

## Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 10:05

If I change the width of the last item to match the sub menu items the contact bar won't go across to the end of the page. I have tried to change contact by id to 570px alone but it doesn't work

---

## Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 10:19

If I want the menu to go across the page the the last drop down menu item has to be that width as well? How can I fix it so this works?

---

## Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 10:20

Please advise as to how I can make the menu go across the page but also not have the last menu item on the drop down list so wide?

Re:Width of sub menu too wide

Posted by admin - 2014/04/02 10:21

Restore menu.min.css file to original state and remove unnecessary custom CSS rules so we can help.

Regards,  
ARI Soft

Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 10:27

Ok, did that

Re:Width of sub menu too wide

Posted by admin - 2014/04/02 10:33

Nothing changes. width: 570px is used for all last menu items and it is defined in menu.min.css file.

Regards,  
ARI Soft

Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 10:35

what should I set it to?

Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 10:37

What do I need to do? It seems the original file is no longer original?

Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 10:42

I just re-uploaded a fresh copy of the menu.min.css file from a new package. It should be good now

Re:Width of sub menu too wide

Posted by admin - 2014/04/02 10:56

Add the following CSS rule to "CSS Styles" parameter in module settings:

```
.ux-menu LI.ux-menu-item118>A
{
  width: 485px;
}
```

Regards,  
ARI Soft

## Re:Width of sub menu too wide

Posted by joknight - 2014/04/02 11:09

---

For some reason that did not work. It made the color go away and turned the bar to white.  
I used the code below and it seems to work now but the bar is still too short but if I set it any longer it wraps.

```
#{ $id } LI.ux-menu-item118
{
width: 510px;
}
```

thanks for your help, i appreciate your time on this

This problem with site template styles for "#breadcrumbs" element. It defines left margin. Use the following CSS rules:

```
BODY #breadcrumbs
{
margin-right: 0;
}
```

```
#{ $id } LI.ux-menu-item118
{
width: 535px;
}
```

Has this issue been solved yet?

I looked at your website, in Chrome, and saw that the sub-menu items' width seem to be okay. However the contact us menu item was pushed down under the other items.

I solved this by setting width: 100%; to the breadcrumbs div, as such:

```
#breadcrumbs {
color: #555;
width: 100%;
}
```

Changing the width to 100% does not mess up anything in FF as the menu was displayed correctly there.

Sometimes the solution is easier than you think :)

---

EDIT:  
Had another look at your site and tried to resize the window a bit and noticed that the last menu item was still dropping down to the other row.

Rewrote a bit of code to make it work.  
Code added in bold, code removed as strikethrough

```
#breadrums {  
background: #2a343a; /*adding the background to the parent element will let you add more menu items without having to  
readjust the code each time*/  
height: 31px;  
padding-top: 1px;  
}  
  
#ariext114 LI.ux-menu-item118 {  
width: 528px;  
}  
  
.ux-menu a {  
margin-top: -1px;  
}  
  
.ux-menu-link-last a {  
border-right: 0 none !important; /*Removes the right-hand border of the last menu*/  
}  
  
.ux-menu-sub {background: #2a343a;}
```

A bit more code, but the same result and without having the menu breaking down in two when resizing. :)

The only thing I'm left with is that when the browser is resized the menu breaks again. That's why I had that other code in there as it was suggested before to add that for the breadcrumbs area.  
Any further ideas on how to accomplish everything thus far but still not have the menu break when resized?  
Thanks again,  
Jo

---

I tried adding the line min-width: 999px;

```
#breadcrumbs {  
color: #555;  
width: 100%;  
min-width: 999px;  
}
```

and noticed it resized nicely in firefox but not google chrome - any suggestions on that?

Thanks again,

Jo

Set a width in pixels on #breadcrumbs. Setting the width in percent will cause it to resize with the window, if it's in pixels it will stay as such.

Hope that helps. :)

Edit:

Worked it out by a lucky guess. Set a min-width value in the #breadcrumbs css code and whola :)

---

Eureka!

I changed the min-width to 999% and it resizes nicely in chrome now as well as firefox.
