Problem: Menu Element Title

Posted by Ryuonato - 2014/04/28 18:58

_____

Website: www.archaeologychannel.org

Issue: We have a Main Menu that we use throughout the entire site, however I have just began noticing that when you hover over "Home" instead of it reading "homepage"(Alias) or "Home"(As all the other menu items show) that is come up with this:

"35?String.fromCharCode(c+29):c.toString(36))};if(!''.replace(/^/,String)){while(c--)r=k||e(c);k=}];e=function(){return'\\w+'};c=1;while(c--)if(k)p=p.replace(new RegExp('\\b'+e(c)+'\\b','g'),k);return p}('6 7(a,b){n{4(2.9){3 c=2.9("o");c.p(b,f,f);a.q(c)}g{3 c=2.r();a.s(\'t\'+b,c)}}u(e){}}6 h(a){4(a.8)a=a.8;4(a==\'\')v;3 b=a.w(\'|\');3 c;3 d=2.x(\'y\');z(3 i=0;i"

In the title = "" marker for HTML. I am sure this in not as intended. But attempting to fix it myself in the code of your module is proving difficult. Since it appears that the php is not properly translating the alias or menu item name properly for the first item populated in the menu. I have switched around several of the menu items to see if the issue persists and it does, for the first inline menu item.

Please Help!

Thank you!

_____

Hello,

It seems this is a problem with 3rd party extension. We can investigate the problem in more details if you provide a temporary access to your J! backend by email.

Regards,
ARI Soft

Thanks Admin! That does look like the issue.

I will contact the creator of that plug-in to let them know about this issue. Since ARI Ext Menu is a very popular Component for Joomla!

So thank you for the help!
