

Hover and Click
Posted by tazzaun - 2014/07/12 18:08

How can I modify the module such that, as opposed to hovering over the menu items to open submenus them, the user can click on the items to open submenus instead? On touch devices this is indispensable. Thank you.

Hello,

The module opens sub-menus by double click (double tap) on mobile devices.

Regards,
ARI Soft

On my Android devices double tapping zoom the page. Is It possible to have submenus open with a single tap?

We have checked the module on Android devices and it works fine. If you want to change behaviour, you can change source code of the menu.

Regards,
ARI Soft
