## Items Styles change when a sub menu is selected

Posted by Rejo - 2014/10/08 09:36

---

Hello,

I changed the text color and background color in the main and sub menu but when I select a sub menu, the menu returns to the basic settings.

To see the problem: <http://www.montandon-materiel.ch/beta3/>

Do you have any idea ?

Regards,  
Rejo

Hello,

Send screenshot(s) with comments where we can see the problem.

In this image, we can see the menu with good settings:

---

But when I click on a sub menu, the menu returns to the basic settings:

[http://www.ari-soft.com/images/fbfiles/images/menu\\_basic\\_settings.jpg](http://www.ari-soft.com/images/fbfiles/images/menu_basic_settings.jpg)

Thanks for your help.

This problem with the following custom styles which are added by 3rd party extension and site template:

```
@media(max-width:400px) {#jfolio194 .mega-covercaption.mobile-hide {display: none;}  
@media(max-width:400px) {#jfolio194 .mega-title.mobile-hide {display: none;}  
@media(max-width:400px) {#jfolio194 p.mobile-hide {display: none;}
```

{ symbols are missed in these CSS rules.

Sorry but I don't understand what I need to change.  
Should add or modify these css rules to the template ?

Thanks for your help.

Find the extension which adds these incorrect CSS rules and disable it or contact extension's developers so they fix it.

Hello,

Could you tell me where do you find these incorrect CSS rules?  
I don't find them in the template and K2 CSS files.

Thanks for your help.

You can see the CSS rules if open HTML source of the page. We don't know what extensions are installed on your site and what adds these CSS rules.
