## Reproducing menu style

Posted by JamesMiller - 2014/11/06 20:08

---

Hello!

First things first, I really like this add-on, It helped me a lot! Now I want to customize it, but sadly the deadline for my website project is near, that's why I have to ask this directly.

Here I have this website. I would like to make my menu to look like this one on the top. I've tried a few times to make the menu width 100% and rearrange all my menu buttons on the center, but sadly I failed. However I found a few forum post here about widening the buttons but that's not the best solution for my case. It worked but looked weird... : )) One more thing I would like to do is to add some custom fonts if possible... :blush:

Hello,

You can read here how to define menu items width.

Thank you, kind of worked for me. It has to be fine-tuned a bit, but as far as I can remember I saw some tutorials for what I need. Now what I cant figure out.

This module is positioned in my Joomla beez3 template on position 1. It only has 4 buttons so I still have some spare space on the right. I tried to add a search box on that right field (in position1 of course) but it went down for a second row. Its a classic question among Joomla users - how to make two modules work in one row - but maybe your module needs some special settings.

---

Modules are loaded into module positions by site template so this question for site template how to show modules in one line in selected module position.

Thank you for your reply. : )

I run into another problem and cant figure out whats wrong with my code.

I have a menu something like this:

---

X is where I want to add an icon.

The code I'm using is this:

```
#{ $id } LI.ux-menu-item166
{
background-image:url(http://iamdifferent.tj/themes/different/images/search.gif);
background-repeat: no-repeat;
background-position: left center;
width: 210px;
}
```

Yet for some reason the icon wont show - although I have enough space for that small icon.

We can investigate the problem when it will be available on a public server.
