Can\'t select menu element when it has a submenu
Posted by amazorra - 2015/05/15 17:20

_____

It happends on mobile (iphone). In web browsers works fine. I haven't tested in android.

Test system in http://www.mazorra.org/Joomla/

For instance the menu element "Biomasa" has a submenu but also an article.

The phone opens the submenu but no the article.

Thanks in advance.

_____

Hello,

Use a doble click to open a link of a parent menu item.

Regards,
ARI Soft

_____

Seems a stupid question. Works fine with a double click.

Thanks. Regards.
