
Drop Down Submenu Not Showing after first click

Posted by flos - 2015/09/14 07:46

Hello

I'm using the ari ext menu very happy for many years now. In the last days I have recognized a strange new behavior: After the first click the submenu is not showing any more.

Can you have a look?

www.masterhomepage.ch

I have sent you a temporary backend access by email

Hello,

A javascript error occurs which prevents execution of "ARI Ext Menu" javascript code. You can see it in browser's error console. The error occurs in the following code:

```
(function($){$(window).ready(function(){$(".wf-media-input").removeAttr("readonly");}})(jQuery);
```

Regards,
ARI Soft

When I unpublish the "System - JCE" Plugin it works.
There seems to be an incompatibility with the JCE Editor.
