## Submenu items don't show after restoration

Posted by MrZuzubu - 2015/09/17 08:41

---

Hi.

So I have been using ARI Ext Menu for a few years.

Yesterday 2 days ago I made a backup of my site, and tried to update from 2.5x to 3.x, my update caused trouble, so I decided to stay on version 2.5x.

Basically after restoring the site (I deleted all files before restoring), my submenu items stopped showing, which is pretty annoying.

Might it be because I updated my php version? Thank you.

Hello,

Send a link to a page where the problem occurs.

Regards,

This problem with "mod\_pixsearch\_ng" module. It causes a javascript error (you can see it in browser's error console) and prevents execution of "ARI Ext Menu" javascript code.
