## can't access Menu Assignment in module

Posted by tkrose77 - 2015/11/19 13:39

---

Hi,  
When I am in Extensions > Modules

and access a module to add the menu to a page I don't see any of the tabs to the right of the Module tab (see attached screen shot).

I realize that I might have an old version:

Installed version 2.2.6

Would an upgrade help? How do I do that? Do I just install through extensions > Manage?

Thanks in advance.  
tk

Hello,

The latest version of the extension is 2.2.11. You can download it [here](#).

Upgrade the extension on your site (install the new version via Joomla! installation page), it should help to resolve the problem.

So if Install the new version without doing anything to the old version it will overwrite it and update? Just want to make sure I don't break it.

The installer does all necessary updates.
