Menu doesnt display in \"menu\" position

Posted by gingerweb - 2016/04/16 14:34

_____

Hi.
the menu works fine in every position except the "menu" position - any ideas why ?

i have copied it temporarirly to the position just below it so i can set it up but i need it to go to the menu position really.

it can be seen here : http://bluefrogtoys.temp-gingerweb.com/ and you can see the space caused by the menu but it doesnt show above the one that works.
i am using Joomla 3.5.1 on a Yoo theme template called Peak

cheers for any help.

_____

Hello,

The page doesn't contain "ARI Ext Menu" so we can't investigate the problem.

Regards,
ARI Soft

Yep thanks for looking, i gave up in the end as it looks like there are some mobile restrictions on the module too, thanks anyway though its a great module for free!
