A question of layers

Posted by Laban - 2016/06/21 19:39

_____

Dear Ari Soft,
Congrats on a nice extension, which I am very happy to use on my site.
However, I would like to know how I can fix a problem that I'm having.

I have a horizontal menu where a dropdown appears as I hover over.
It works fine as long as the window is wide enough so that the menu doesn't have to cross a linebreak.
Because, when that happens, the dropdown appears behind the horizontal main menu, and you can't see or click it. (see screenshot)

Also, I have DJ SLide show extension, which has the feature that it can show the image full-size in a "magnifier popup" while dimming the rest of the website.
When this is done, the ARI Ext menu will still be on top of that image too.

It seems the horizontal menu simply overlies everything. How can its layer be put in the background? How can I solve this issue?

Thanks a lot! http://www.ari-soft.com/images/fbfiles/images/Untitled_1-2ecb6b80f42a8553dccdf8e3b4636771.jpg

_____

Hello,

Could you provide a link to a page where the problem occurs so we can investigate it?

Regards,
ARI Soft

_____

Add the following CSS rule to "CSS Styles" parameter in module settings:

.ux-menu-sub {z-index:20001;}

Regards,
ARI Soft

_____

Thanks for a quick and effective solution.

It works, but it is still on top of the image in the magnifier popup. Try clicking on the changing image on the front page.

Perhaps the solution is to move that popup up in the layers instead.. Hm.

_____

Decrease value of "z-Index" parameter in module settings. For example set it to 100 and change value of "z-index" CSS property in the CSS rule from the previous post, set it to 101.

Regards,
ARI Soft
