
On cell phones you do not see the first menu items

Posted by Graffione - 2016/07/25 08:36

Dear,
congratulations for the good work you do.
I installed on my site www.caderissi.it Ari_Menu .
When I browse from my phone or when I have the pc browser narrower and the menu you have multiple lines, the sub-menu items are hidden from the main menu items.

I attach some pictures
Why? <http://www.ari-soft.com/images/fbfiles/images/Immagine1.jpg>

Hello,

Add the following CSS rule to "CSS Styles" parameter in module settings:

```
.ux-menu>A {z-index:20000;}
```

Regards,
ARI Soft

Yes, but sorry for the incorrect CSS rule. It should be:

```
.ux-menu-sub {z-index:20001!important;}
```

Regards,
ARI Soft
