
compatibility with php 7

Posted by WR406 - 2017/01/27 09:43

Hy,

I try to "update" my website (www.haflinger-ersatzteile.at) Joomla 3.6.5 to php 7 and got the attached errors.

Are there any changes I can do myself to fix this problem?

Do you plan to update ARI Ext menu to be ready for php 7?

Thank you und best regards,

WR <http://www.ari-soft.com/images/fbfiles/files/errors.txt>

Hello,

The module works with PHP 7, these are only warnings for developers which are shown when web server is configured in dev mode. We are going to change code of the extension to follow PHP 7 standards.

Currently try to do the following:

1. Open "System -> Global Configuration" page on Joomla! backend.
2. Open "Server" tab.
3. Set "Error reporting" parameter to "None" value.

Regards,

ARI Soft

Hello,

thanks for the fast reply.

Best regards,

WR
