## Sub menus all the same width (horizontal)

Posted by thefullnoise - 2010/08/02 02:21

---

Hi, I've searched the forums extensively but can't seem to nail this one. (I'm sure ts simple).

I would like my sub menus to be all the same width, at the moment the auto size to fit in the menu label.

widths work fine in vertical layout

<http://summerhouse.thesittingroom.co.nz>

Thanks

Hello,

This problem with site template styles. Add the following CSS rules that fix this issue:

```
#top-menu .ux-menu-sub LI
{
display: block;
}
```

```
#top-menu .ux-menu-sub LI A
{
float: none;
}
```

Brilliant, thanks.

one last issue. Under the 'Our wine' main item, the first sub-item is supposed to be 'Sauvignon Blanc' but it is dropping behind the second item and becoming hidden. essentially the drop menu isn't wide enough. (also affecting the third level item).

Thanks for the excellent support.

Could you describe this issue in more details? When we open the page in a browser, everything looks normal:

Hmm, you are right, working perfectly in all browsers I checked. I had some weird chace thing going on with Firefox.

Thanks again.
