## ARI EXT button hover style and color and text colo

Posted by BarendGoussard - 2017/08/28 09:23

---

Hi. I have three questions, all in one. I have the ARI EXT for Joomla 3.7.5 and this menu is absolutely amazing. I would just like to know a few things, if anyone would write me a complete css style for the module that would be awesome, as I know nothing on coding. I managed to change the background color, but I don't know how to add/change the text color, and also to add a hover effect to the buttons.

And another thing I noticed, there is this 1px border around the tabs. how do I get that away?

ANy help would be much appreciated!

Hello,

The module supports ability to set text color and text hover color. See "Text color" and "Hover text color" parameters in module settings.

Regards,  
ARI Soft
