
Have different button- width on vertical menu

Posted by turalatin - 2017/11/15 06:42

Hi

I tried to make a vertical menu, but the buttons have different width.
-> <http://212.183.30.61/index.php/rc-helicopters/by-country/germany/schlueter>
Tried to switch between auto-width, without success.
How can the width be adjusted?

Thanks and kind regards
KLaus

Hello,

Set "Load ExtJS library" parameter in module settings to "Yes".

Thanks a lot for your reply! It works!
Is it possible to set the width to a fix value?

Kind regards
Klaus

Add the following CSS rule to "CSS Styles" parameter:

```
.ux-menu-vertical>LI {  
  width: 120px !important;  
}
```
