
[SOLVED] Update ARI Ext Menu module

Posted by filipetorres - 2017/12/06 17:33

Hi,
I need to update ARI Ext Menu module from 2.0.22 to 2.2.12 version, but this module does NOT implement the Joomla! Update System.
How should I proceed to update this module without module data loss and website menu continue to work?
Thanks in advance.

Hello,

Just install new version via standard Joomla! installation page. It updates the previous version with the new one.

Regards,
ARI Soft
