
Not viewing correctly in IE8? PC

Posted by outersquare - 2010/08/16 02:53

Hey everyone, menu looks awesome.

Views perfectly on Firefox, Safari (MacOSX & PC), but when viewed on Internet Explorer on the PC it trips out?

I've attached a screen shot of how my menu looks on firefox and explorer.

My website address is <http://www.outersquare.com.au/loveangels/>

Thank you very much in advance for responses. http://www.ari-soft.com/images/fbfiles/images/screenshot_firefox.png

Hello,

Add the following code to site template between `<body>` and `</body>` tags:

wow! thank you very much!

I honestly thought there wouldn't be a solution.

It worked but now the sub menus in the drop down don't show? Sorry for the additional question but I'm guessing it could be related to the code I put in?

Thank you very much once again.

Hello,

Cufon is used on your site with the menu and we suppose problem with this script, unfortunately we don't have a time to investigate this specific issue now.
