Module Class Suffix not working.

Posted by webbo - 2018/06/15 10:15

_____

Hi,

I'm trying to hide the module on mobiles and templates. On other modules the module class suffix 'hidden-tablet hidden-phone' does the job, but on ARI Ext Menu module it's not working. Please could you advise?

Many thanks,

Ollie

_____

Hello,

Add the following code to "CSS Styles" parameter in module settings:

```
@media (max-width: 768px) {
 #{$id}_container {
   display: none;
 }
}
```

Regards,
ARI Soft

_____

Hi,

Thanks for your reply. However, I've add the code as you suggested and it's still not working.

Site is http://testenv.springfield.uk.net, if it helps you to take a look.

Many thanks,

Ollie

_____

Could you send screenshot of module settings page (we need "CSS Styles" parameter). It seems {$id} part is omitted.

Regards,
ARI Soft

_____

Yes, {$id} was missing. No idea why that didn't copy across. It works now - thanks for your help!
