## Ari Ext Menu Scrolls on top of Main Menu

Posted by Krumz1 - 2018/08/02 00:34

---

Hello,

Let me start by saying I really like your menu and I hope one day it is part of the Joomla Update System.

Anyway, I just noticed that your menu scrolls on top of the main menu of the website I'm building. I've used this menu on many websites in the past and have never noticed this before.

The template I'm using is Joomla! JA Simpli template. It has an option in the template settings to have the menu Sticky on Top, which I am using. None of my other websites use this kind of feature (sticky on top) and menu and all just scroll off the screen (which is why I have probably never noticed this)

The site is not live so I have attached a image showing the issue.

Thank you.

Hello,

We can investigate the problem when the site will be available online because we can't do it by a screenshot.

Regards,  
ARI Soft

Hi thanks.

Site won't be live for a while. Is there any way for you to try and replicate the issue.

You can reproduce the problem on another test site and provide a link to it. The link can be sent by email.

Thank you.

I will email you site information where I can give you access to check this out. Thanks again.

I just changed this code in my custom css file and it seems to stop it from scrolling on top:

```
.ux-menu-container {  
    position: inherit !important;  
}
```

Is this a correct change? Also, I have noticed whenever I make css changes in my custom css file (which is where I should make all changes so when extensions update my changes don't get overwritten) I have to use "!important" or my changes are overruled by your settings? Why is that?

The site template can add specific CSS rules for the selected module position and it can affects on "ARI Menu Module" module.

Sorry, I also forget about the css styles field in the module. No more !important required.
