
Can't assign menu to menu items, tabs missing.

Posted by jbozaan - 2018/12/09 19:08

Hi,

We updated our site and now the submenu items are not working. I recreated one of the submenu items and it works, however, I can't assign the menu module to the new menu item as the tab for "menu assignment" is not displaying. Only the "module" tab displays, the rest are missing:

http://www.ari-soft.com/images/fbfiles/images/Screen_Shot_2018_12_09_at_1.png

There are a couple errors in the console that might be causing the issue:

```
mooRainbow.js:19 Uncaught ReferenceError: Class is not defined
    at mooRainbow.js:19
(anonymous) @ mooRainbow.js:19
```

```
index.php?option=com_modules&view=module&layout=edit&id=142:248 Uncaught TypeError: window.addEvent is not a
function
    at index.php?option=com_modules&view=module&layout=edit&id=142:248
(anonymous) @ index.php?option=com_modules&view=module&layout=edit&id=142:248
```

We're using Joomla 3.9.1. Any ideas on how to fix this?

Thanks!

Hello,

Make sure you use the latest version of the extension (2.2.12).

Regards,
ARI Soft

Thank you for the speedy reply! I looked for updates on that and didn't see any, we have version 2.2.11. I'll take another look for that.

Regards,
John
